AcuFocus Announces Extended Diopter Range for the IC-8® Small Aperture IOL

IRVINE, Calif. – (July 28, 2020) – AcuFocus, Inc., a privately held ophthalmic medical device company, announces today the **IC-8** small aperture intraocular lens (IOL) power range now extends from +10.0 D to +30.0 D (0.50 D steps), offering eye care physicians the opportunity to provide more patients an uninterrupted extended range of vision from near to far.

The **IC-8** IOL is a clear, aspheric monofocal lens with an embedded mini-ring or pinhole in the center. Utilizing small aperture technology, this novel lens is designed to increase a patient's natural range of vision by protecting central organized light rays that enter the eye and restricting peripheral light rays that degrade image quality and range of focus.

“Having the **IC-8** IOL in my practice has provided an exceptional option for my patients who are looking for spectacle independence,” says Professor Sathish Srinivasan, cataract and refractive surgery specialist at University Hospital Ayr, Scotland, and Medical Director of Ayrshire Eye Clinic. “With the expanded power range, the majority of my patients will now be able to access the benefits of small aperture optics.”

Clinical studies demonstrate the **IC-8** IOL produces unparalleled visual outcomes that deliver nearly 3.00 D of continuous and uninterrupted range of vision¹, compensation for up to 1.50 D of corneal astigmatism^{1,2}, and excellent image quality¹.

For additional information about the **IC-8** intraocular lens, visit www.acufocus.com.
